1. SUMMARY

Welcome to THE Doge Pound NFT Whitepaper. With this official statement, we'd like to introduce you to our project, give you an in-depth overview of it and provide you with all the necessary information about it.

We will delve deeply into the psychology and idea behind The Doge Pound, our progress so far, technical solution, plans, native token, and final vision and goal. We sincerely hope you will enjoy reading through all of the explanatory sections of our project, find them useful and valuable, and discover even more reasons to join us on our never-ending thrilling mission.

Our vision is to create an ecosystem for Doge holders, create value for them, and bring long-term benefits.

2. INTRODUCTION

Art is the soul of humanity. Blockchain offers mankind unfettered freedom. Combining these two most important components for human wellbeing, which results in pure happiness, and adding a spark of modern-era technology creates NFT Artwork, the real treasure of the 21st century. The Doge Pound NFT is exactly that, hard work and creativity showcased in 10.000 unique pieces of art. But first thing first, to understand an idea behind it you need to know what got us going. With a fast-paced lifestyle and a rapidly changing environment, the demand for relief provided by art began to grow.

However, quality work production has begun to decline because artists need money to become popular to sell their work, they need their name to be heard, and they earn a low wage. Many talented people in less affluent parts of the world have been forced to choose something else; people have been forced to abandon art. But talent, passion, and creativity are still present and will never fade.

Furthermore, the inherent flaws of the conventional art market remain unsolved, making it impossible for the general public to exchange artworks. Ordinary folks cannot afford to feel joy and fun through artwork. Art lovers must have considered the possibility of acquiring certain works of art at some time and have them in their possession. We felt the same.

And then again, Technology to save the day. It has aided us in numerous ways, allowing us to connect, creating new economies all over the world, and providing equality to many. That same technology is now saving art, that's why we all owe big thanks to blockchain and NFT technology.

The use of blockchain technology in the artwork market is ushering in a tech transformation in art. First, the digital economy's sharing mechanism is incorporated into the art industry. Blockchain technology has the potential to give artworks a second chance in the digital realm by making it impossible for counterfeit pieces to be sold and therefore stops fraud.

We needed to provide you with information about where the original idea for starting this project came from; now that you understand it, we can be more specific about the project itself.

Let's face it, who doesn't adore dogs?

Who hasn't heard of Dogecoin, the "people's cryptocurrency"?

Who hasn't heard of Elon Musk's involvement and influence in the cryptocurrency scene?

It all adds up to one hell of a story, and it's so much fun and encouraging that it completely inspired us to write our own story, one that's becoming more than just a story; it's become a lifestyle.

3. PROBLEM DEFINITION

With the recent surge in interest in the NFT Art Industry, many projects have created wonderful art pieces, but we believe that is not enough to be perfect. That is why, to stand out in a sea of avatars, we took one step forward and created a great utility and use case, so The Doge Pound can be a longterm project that constantly evolves and produces value to our community, and make it grow.

In order to give more value to our OG Doge holders, we've created a number of new use cases. Our Doges will be assigned genders and will be permitted to breed. This opens the door for our next use case, a Puppy. Also, we have created a "Feeding Game." Each of these use cases will be discussed in depth in the upcoming sections.

Hard work, continuous improvement, and, most importantly, love for our Doges and story bring us closer to our ultimate goal, which is for the community

to recognize the value we produce. Our vision is for all of our Doge prices to be very high and consistent, as all of our doges are equally special.

4. TECHNICAL SOLUTION

We emphasized the importance of technology, specifically blockchain technology and the Ethereum smart chain, at the beginning of this official statement. It would not be possible without it, so we are extremely fortunate to be living in this era.

We used the ERC-721 protocol to generate our tokens. ERC-721 NFTs help to bring this concept to the blockchain, ensuring that unique details about an asset are preserved. In our case, NFTs are used to provide a digital representation of a one-of-a-kind work of art, with ownership easily proven via blockchain records. As a result, counterfeiting is reduced to a minimum, increasing the scarcity of The Doge Pound NFTs.

Our OG Doges have been generated algorithmically and at random by mixing various properties with different possibilities in the following categories:

Background, Clothing, Earring, Eyes, Eyewear, Mouth, Fur, and Hat.

We have an integration with the leading NFT marketplace, OpenSea, on which we have our own marketplace/store where you can buy and resell listed Doges for Ethereum. The simplest method is to download a MetaMask wallet, connect it to OpenSea, and easily purchase the desired Doge; however, you must first win a bid. If you want to transfer the Doge to someone, simply send it from your MetaMask wallet, and by adding address and ID your recipient will see it on their wallet shortly.

4.1. Minting puppies and 3D Doge Collection

Any holder can mint a puppy for free, with the exception of paying the gas fee. Only one puppy can be minted by one unique OG doge male or female. So only 10k puppies can be minted. But keep in mind that after selling/transferring the OG doge from which you earned a puppy, a new owner will be unable to mint a new puppy using the same OG doge.

We're also excited to announce that we're working on a tradable collection for 3D Doge Collection. It will be produced as an ERC721 Token, in the same way as puppies are minted. So, only OG doge holders can mint the 3D Doge collection.

4.2. Breeding OG doges

We meticulously crafted 10.000 distinct Doge pound NFTs, which have already been distributed. The Initial Mission is accomplished.

However, we kept thinking about our Doges, developing, and producing interesting concepts, which led to the creation of a major use case. As a result, we are more than excited to announce the start of the breeding season with our new NFT "Breeding" feature.

Let us explain how it works so you can have a better sense of how awesome it is. First and foremost, for breeding to be available, we'll be adding a gender feature; females will take 50 percent of the population, while males will be on 50 percent. Females are called Doggo, and males are Doge.

1) How will the breeding process work?

- Breeding will only be possible between a Doge and a Doggo.
- It may occur once every month. This methodology and time frame will be depending on the market and, as a result, will change.
- Action will be taken based on The Doge Pound's influence following the breeding process. Get in line, become the OG Doge top breeder.
- Doge owners are in charge of breeding and can list their availability as well as the cost of each breeding.
- Doges will be permitted to participate in the breeding process twice every month, whereas Doggos will be limited to do so only once.
- Owners of Doggos are in full charge of picking the Alpha Doge to breed with. They can do it for any reason; some want their babies to be intelligent, while others want to have a puppy with a strong and powerful mate.
- It's important to know that the same couple, Doge and Doggo, can breed only once. If a Doge wants to breed again, he needs to find a different Doggo.
- The result of breeding 1 Doge and 1 Doggo is 1 Puppy.

- The breeding process doesn't award you an OG Doge, just a Puppy.
- Puppy inherits random traits from its parents
- All holders have a chance for their puppy to be of a high rarity, obtaining special traits like diamond hands and astronomer wear
- The breeding fee will be distributed in such a way that it best serves the community, with 20% going to the team and the remaining 80% going to the Doge owner
- The breeding process cycle fully ends with Doggo taking a new Puppy. Welcome home little tail-wager!

2) How do "puppy" work and its perks

Puppy is a brand-new collection that depicts an original Doges child. The breeding process between a Doge and a Doggo will be generating a puppy to Earth, Moon, or whatever part of the Universe the pound conquers.

One unique Puppy will be produced by one OG Doge couple's breeding. For example: if there are 5000 unique Dams, there will be 5000 unique puppies. When the breeding process ends, the owner of the Doggo immediately receives a new puppy.

Puppies that are initially minted by the OG Doge holder are going to take numbers from 1 to 10.000. They are going to have Generation 1 traits.

However, puppies made by breeding will take numbers higher than 10.000. They are going to have Generation 2 traits, 3, 4...

4.3. Feeding Game

- We have prepared amazing news for puppy owners with our outstanding "Feeding Game", where owners of newcomers will be able to feed and raise their whelps.
- We have strategically planned the game, so in the further text you will find a brief explanation. Every puppy holder obtained from minting or breeding can play this web feeding game. Don't forget to keep an eye on the little guy, and make sure he eats healthy! ○ The feeding phase lasts one week. During that time, you will be able to feed, pet, walk, play, and exercise with your puppy daily.
- There will always be a broad selection of food options at the Doge Pound feast. Most of them will be free, while some will be premium, and you will need to purchase them.
- You must feed your puppy unless you want it to be hungry; you must give them appropriate food, take them for walks, play with them, and make them happy.
- After one week, the feeding game is over, and it's time for rewards. Every puppy owner who participated in the game will be rewarded. The more and better food you gave your puppy, and the more care you provided

for your puppy the higher the reward will be. If the feeding process went well, your puppy may have a better chance of acquiring special traits.

- The rewards will be in our native PND Token. This token will be valuable, and the price of the token will be determined and maintained by puppies and 3D Doge Collection trading fees on OpenSea.
- Every puppy will have one special trait known as a "Hobby." There are around 10 various sorts of hobbies, like sports, astronomy, singing, scientist, etc.
- If your puppy likes singing, that means it will become a singer. If your puppy's hobby is singing, you should support and nourish them in accordance with their hobby. The more you pay attention to their hobby, the happier the puppy will be, and the rewards will be greater.

4.4. PND Token

We will create our governance PND Token. Our native token will be running on the ERC-20 network, and it will be listed UniSwap and/or SushiSwap. We plan to make a part of the DeFi system.

The PND Token will be used as a weekly rewards system for puppy owners for feeding game. The better you feed your puppy the higher the reward. The price of the token will be maintained by added liquidity to the pool and 3D Doge for OG 2D Doge and Puppy's trading fees on OpenSea.

The total supply of the token will be unlimited. PND Token is minted when the reward is collected. Burning tokens will happen when the premium food is bought and when the name is changed. As a governance token, PND can be used to vote on decisions that influence an ecosystem.

The detailed and exact tokenomics will be announced soon.

4.5. Staking

We are proud to say that we will have the NFT staking system. Unlike others, our system will be special because it will be gamified in the form of Moon/Mars Mission. But in essence, it's still a staking process that provides a good way for holders to receive rewards and controlling the price on OpenSea. It will work in the following way:

- An individual stakes the NFT, once it's been staked the owner doesn't have control over it for a time of staking, meaning he can't participate in the process of breeding/transfer for that time.
- The staking process length can be 2, 4, 6, or more weeks. The difference is in the reward amount, the longer a person holds the bigger the reward gets.
- We will also consider adding traits, like a medal for Moon Mission return but in a way that it doesn't change the rarity order of tokens.
- Anyone who holds The Doge Pound NFT will be allowed to participate in staking and the rewards will be able to be withdrawn daily. Rewards will be distributed in the PND token on our dashboard.
- There will also be the option to stake ETH/PND liquidity pair, which will result in more rewards.

4.6. Adding and changing the name

It is also possible to change or add the name of your OG Doge. It will be shown on OpenSea in the following format: "Doggy #1000 Shiba Inu."

Adding a unique name to your OG Doge is completely free. However, if you want to alter it later, you must pay in PND Token.

After the process of changing the name is completed, this PND Token will be burnt in order to keep the token price stable.

5. BENEFITS

- OG Doge holders will have significant benefits from our upcoming use cases, "Breeding" and "Feeding" Game. ○ By implementing these use cases in The Doge Pound NFT, we will attract more users which will automatically result in higher OG Doge prices. That is statistically one of the key elements and springboard for the future.
- Just by playing the game, you will be able to earn. The breeding fee will be divided such that it best benefits the community, with 20% going to the team and the remaining 80% going to the Stud owner.
- If you own a Dam, you will be rewarded with the benefit of receiving a puppy. ○ We have developed a reward system functioning in a way of DeFi, allowing reward distribution for feeding puppies in PND Token. The more you feed them and take care of them, the higher the reward is. Holders will be able to claim rewards weekly.

○

6. CONCLUSION

Non-fungible tokens are extremely versatile instruments that appeal to an innate human desire to own rare and unique items.

The Doge Pound's ultimate goal is to become the most successful NFTbased project with the best functionalities and use cases that will benefit our community both financially and emotionally while having fun along the way. Each stage of our development is thoroughly planned in order to provide increased value to our holders, boost interest, and let people interact with one another through our The Doge Pound community.

The possibilities are endless, the limit is only in one's creativity and we plan to take full advantage of it. This is just the beginning, and we intend to be here for the long term, serving as leaders and inspiration to future generations of projects attempting to carve a path in the NFT space.

Renaissance, Baroque, Cubism, and Realism are indelible parts of history, and we are here to welcome the new style of NFT art, art on a completely different level, art with a purpose, which The Doge Pound undoubtedly is!
